1. Introduction

(a) Scope

Chelku Vegetable Company is a wholesale vegetable trading and distribution business operating from an APMC (Agricultural Produce Market Committee) market. The firm is engaged in the procurement, handling, grading and wholesale sale of fresh vegetables, and plays an important role in connecting vegetable growers with retailers and other buyers in the local market.

The scope of the business includes procurement of fresh vegetables from farmers, suppliers and agents, wholesale vegetable trading, sorting and grading, weighing, handling and temporary storage, and selling vegetables to retailers and other buyers. The firm also carries out distribution and dispatch of vegetables to buyers in the market.

Since vegetables are a daily food requirement, the business experiences regular and consistent demand throughout the year, with fluctuations in supply and prices depending on the season. The company has good future potential, as it can expand its buyer network, improve handling and storage practices, and explore additional wholesale opportunities within the APMC market.

(b) Products

Chelku Vegetable Company deals in fresh vegetables. The product range may include mango , cabbage, amla, sweet potato, cauliflower, capsicum and other fresh vegetables, depending on availability and market demand.

Major product specifications for the vegetables handled by the company include:

- Product Category: Fresh Vegetables (Wholesale Trading)
- Freshness: Vegetables are procured and sold on a regular basis to maintain freshness
- Quality: Checked at the time of procurement for freshness, ripeness and physical condition
- Size/Grade: Sorted and graded as per size, quality and market requirement
- Weight: Vegetables are weighed using standard weighing equipment before sale
- Packaging: Vegetables are packed in crates, bags or other suitable packaging material for handling and transport
- Handling: Careful handling is followed to minimise damage and wastage during loading, unloading and storage
- Storage Requirements: Vegetables are kept in a suitable temporary storage area within the market premises before sale

Product quality is primarily maintained through careful procurement, sorting, grading and proper handling of vegetables at each stage of the trading process.

(c) Process / Business Process

The process begins with the procurement of fresh vegetables from farmers, suppliers or agents, after which the produce arrives at the APMC market and is unloaded. The vegetables are then quality-checked, sorted and graded according to size and condition, followed by weighing on standard weighing equipment. The graded produce is kept in temporary storage or handling areas before being sold to retailers and other wholesale buyers. Once sold, the vegetables are packed and loaded for dispatch to buyers, and the payment received is rotated back into the business to purchase fresh stock. The exact process may vary depending on the type of vegetable and actual business practices followed by the company.

(d) Marketability

Vegetables are essential food products with regular and daily demand, which gives Chelku Vegetable Company a stable and consistent market. The business supplies to retail vegetable sellers, local vendors and other wholesale buyers, and may also cater to hotels and restaurants where applicable.

- Vegetables are essential food products with daily consumer demand
- Regular purchases from retail vegetable sellers and local vendors
- Possible supply to hotels and restaurants, where applicable
- Additional demand from other wholesale buyers in the APMC market
- Seasonal variation in demand depending on vegetable type and availability

- Price fluctuations based on supply and demand conditions
- Freshness and quality as key factors influencing buyer preference
- Competitive pricing to retain regular buyers
- Long-term relationships with suppliers and buyers
- Efficient and timely distribution of vegetables to the market

(e) Location

Company Name: Chelku Vegetable Company

Business Location: UA-34, Sardar Vegetable Market , Sanjay Nagar , Surat, Gujarat, India

An APMC market location is suitable for a wholesale vegetable trading business because it provides direct access to vegetable suppliers, growers and agents, along with the presence of wholesale buyers and retailers within the same premises. The market also offers transportation facilities, labour availability, and infrastructure required for easy loading and unloading of produce. The high concentration of agricultural trading activity in the APMC market further supports efficient procurement and distribution of vegetables.

(f) Source of Finance / Money Rotation

Source of Finance:

The main source of finance for Chelku Vegetable Company is the owner's own capital. The capital is used for purchasing fresh vegetables and meeting regular business expenses such as transportation, labour, loading and unloading, packaging, and other market-related expenses.

Working Capital Cycle / Money Rotation:

The business follows a regular rotation of working capital rather than a fixed repayment schedule. Capital is used to purchase fresh vegetables, which are then sold in the wholesale market after meeting transportation and other market expenses. The money received from sales is rotated back into the business to purchase fresh stock and to meet ongoing operating expenses.
